In the 19th century, some of the most important canals in the world were conceived or constructed, and while the Panama Canal and Suez Canal are better known, the Chicago canal is one of the greatest engineering projects in history. At nearly 30 miles long, the construction actually managed to reverse the flow of parts of the Chicago River, and though it was intended to be for sewage treatment, the canal continues to operate today, over 115 years after it officially opened. In the process, the canal opened up transportation between the Great Lakes and the Mississippi River, cementing Chicagos status as one of the most important cities in the United States.
